InterSite PropaGator

InterSite PropaGator

InterSite PropaGator is the latest enhancement created for companies using the Infor XA ERP system and the MISL module. InterSite PropaGator has been designed to keep applications, files and data current across multiple environments or System i machines. InterSite PropaGator can be utilized in multiple XA environments on a single System i, or across an unlimited number of System i machines.

One of the most difficult tasks in running multiple Infor XA environments is keeping files synchronized across an enterprise. Historically, this process would require time-consuming replications or custom coding, or worse yet re-keying of data. In many cases data could be inaccurate or obsolete by the time it was passed to remote locations. That is why we developed InterSite PropaGator.

InterSite PropaGator is not program specific and utilizes IBM DB2 for i triggers, so it can be used to propagate nearly any file, record, or field of data. PropaGator is configurable and works in real-time, so all users in all locations see changes as they happen. IBM Common Programming Interface Communications (CPI-C) programming and use of IBM Anynet/Enterprise Extender facilitate the "middleware" for intelligent communications between all systems. Developed using RPG IV and ILE RPG, it is maintained using the IBM Rational Developer for Power Systems toolset to insure the integration of latest features, and is available for i5.4, i6.1 and i7.1 for your System i or Power System.

InterSite PropaGator offers a fast, simple, and effective solution to a very pressing problem for many companies. If you would like more information about InterSite PropaGator or any of our other exciting enhancements call today!

InterSite Propagator…

- **Keeps databases in multiple environments current with each other in real time**

- **Eliminates the need for time-consuming database replications or manual re-keying**

- **Is fully configurable and highly flexible**

- **Currently in use worldwide**

InterSite PropaGator

InterSite PropaGator has been designed to dramatically simplify the process of keeping computers synchronized across an entire enterprise and is an effective solution to enable real-time data propagation across multiple System i's. PropaGator is flexible and fully configurable, making the system easy to manage, saving time, money and improving customer service. Call Agility today for more details!

Required Infor XA Modules

Cross Application Support (CAS) at Release 7.8, 9.0, or 9.1
InterSite Logistics / Multi Environment InterSite Logistics (ISL/MISL)

Optional Infor XA Modules

Product Data Management (PDM)
Engineering and Product Data Management (EPDM)
Inventory Management (IM)
Customer Order Management (COM)
Purchasing (PUR)
International Financial Management (IFM)

Predefined Applications and Files in InterSite PropaGator

Application	Number of Files
Cross Application Support (CAS)	20
Customer Order Management (COM)	40
Enterprise Product Data Management (EPDM)	17
Product Data Management (PDM)	4
International Financial Management (IFM)	77
Inventory Management (IM)	7
Purchasing (PUR)	7
